

**Figure 1. Receiver operator curve showing the discrimination of the clinical prediction model for maternal end-organ injury or death arising between 20 weeks' gestation and 42 days after birth, using variables measured pre-pregnancy, and in the index pregnancy prior to 20 weeks' gestation. Analysed is the entire cohort of 634,290 births.**

C-statistic for Area Under the Curve = 0.68 (95% CI 0.66-0.69)
